About The Course Update

I completely re-recorded the entire course!

Primarily because react-navigation changed (but some other things also became a bit outdated)

I also polished the example apps + added some brand-new example apps

Section structure is the same as before (but lectures were replaced with new lectures => Not a 1:1 replacement)

New course was inserted in front of old course, old content is kept around until April 29th

How Should You Proceed?

Course not / barely started?

You haven't started yet or you're just a few hours into the course

Consider re-starting

You may proceed with the updated sections (without restarting) if you haven't started the "Navigation" section yet

Well into the course

You are already 5+ hours into the course

Restart at the "Navigation" section

Alternatively, complete the old course and consider going through the new course at some point in the future

Course completed

You completed (most of) the course

Consider restarting the course & going through it again

You can also ignore the update entirely
